## FINAL EXAMINATION

TRIMESTER 2, 2019/2020

**BFN2094 – CORPORATE RISK MANAGEMENT**

( All sections / Groups )

13<sup>th</sup> MARCH 2020

9.00 a.m – 11.00 a.m

( 2 Hours )

---

### INSTRUCTIONS TO STUDENTS

1. This question paper consists of SIX (6) printed pages with four (4) questions and financial tables only excluding the cover page.
2. Attempt ALL questions.
3. Please write all your answer in the **Answer Booklet** provided.
4. Marks are shown at the end of each question.

There are **FOUR (4)** questions in this section. Answer **ALL** questions.

**Question 1 (25 Marks)**

- (a) Duduk Bhd is a manufacturer of childcare safety products, primarily car seats and strollers. The products are sold directly to the independent retailers in South East Asia. The company's risk manager knows that the company could be sued if a car seat or a stroller is defective, and someone injured. Because the cost of products liability insurance has increased, the risk manager's is considering other techniques to treat the company's loss exposures.

- i. Describe the four steps in the risk management process.

**(8 marks)**

- ii. List and recommend two (2) major risk-control techniques and examples that Duduk Bhd. can apply for reducing the frequency or severity of losses due to potential product defects.

**(10 marks )**

- (b) Explain the difference between *pure risk* and *speculative risk*.

**(3 marks)**

- (c) How does *diversifiable risk* differ from the *nondiversifiable risk*?

**(4 marks)**

**Continued...**

**Question 2 (25 Marks)**

(a) Private insurers provide social and economic benefits to society. Explain the following benefits of insurance to society.

i. Indemnification for loss

(3 marks)

ii. Enhancement of credit

(3 marks)

iii. Source of funds for capital investment and accumulation

(3 marks)

(b) Explain the two (2) major costs of insurance to society.

(4 marks)

(c) Camila and Shawn enter into a pooling arrangement for accidental losses. Assume that their losses are independent of each other and have the following distribution:

Possible outcomes ( $x_i$ )	Probability ( $p_i$ )
RM 0	0.945
RM 500	0.05
RM 1,000	0.0045
RM 5,000	0.0005

i. Compute the expected loss before risk pooling.

(4 marks)

ii. Prepare a probability distribution table after the risk pooling.

(8 marks)

**Continued...**

**Question 3 (25 Marks)**

- (a) A firm incurred the following insured losses, in the order given, during the current policy year.

Loss	Amount of Loss (RM)
A	2500
B	3500
C	10,000

How much would the company's insurer pay for each loss if the policy contained the following type of deductible?

- i. RM10,000 straight deductible.

(6 marks)

- ii. RM15,000 annual aggregate deductible.

(9 marks)

- (b) Sulaiman, age 25, is considering the purchase of a RM20,000 participating ordinary life insurance policy. The annual premium is RM248.60. Projected dividends over the first 20 years are RM814. The cash value at the end of 20 years is RM4314. If the premiums are invested at 5% interest, they will accumulate to RM8631 at the end of 20 years. If the dividends are invested at 5% interest, they will accumulate to RM1163 at the end of 20 years. A RM1 deposit at the beginning of each year at 5% interest will accumulate to RM34.72 at the end of 20 years.

- i. Based on the *traditional net cost method*, calculate the cost per RM1000 per year.

(5 marks)

- ii. Based on the *surrender cost index*, calculate the cost per RM1000 per year.

(5 marks)

**Continued...**

**Question 4 (25 Marks)**

- (a) List the major advantage and disadvantage of purchasing an insurance policy on aggregate property and liability losses versus purchasing a separate property insurance policy and a separate liability insurance policy.
- (4 marks)
- (b) Suppose Cerdik Bhd. is considering spending RM10 million this year to improve the safety of its manufacturing facilities. It estimates that the annual frequency of accidents per employee will fall from 5% to 4% and that the average severity of accidents will fall from RM20,000 to RM15,000 per year as a result of the renovation in each of the next 9 years. Assuming a constant workforce of 5,000 employees over this time, should the firm spend the RM10 million if the required return is 7%?
- (13 marks)
- (c) Fatimah owns a jewellery shop in a high crime area. The store does not have a camera surveillance system. The high cost of burglary and theft insurance has substantially reduced her profits. A risk management consultant points out that several methods other than insurance can be used to handle the burglary and theft exposure. Identify and explain two (2) *noninsurance* methods that could be used to deal with the burglary and theft exposure.

(8 marks )

**End of Page**
